WINDOWS IN A CONTEMPORARY DESIGN

Give your building an
elegant look

Using contemporary windows in new buildings and renovation projects achieves a beautiful and elegant appearance and reflects a slim architectural style.

Browse more great examples at www.unikfunkis.dk – Inspiration

MODERN WINDOWS

Look good ... and get a
good look outside

Modern, bright buildings with energy efficient doors and windows.
Designed and produced according to your requirements.
Great designs that looks great and offers panoramic views.

Let us help you to get a comfortable environment inside.

Cottage window with modern energy saving aluminum glazing bars

COTTAGE WINDOWS

Traditional windows used in country homes

Cottage windows are typically made from pine, but they are available in mahogany or in a wood/aluminum combination that is very easy to maintain. They come with glazing bars and frames in a variety of profiles.

We provide you with the best design to suit your home.

CASEMENT WINDOWS

A good choice for renovations of older buildings

When renovations need to be true to the original design, it makes sense to use windows that look the way they did 'back then' but offer the energy savings of a wood/aluminum combination and energy efficient glazing and bars.

FIXED FRAME WINDOWS

Energy savings, lots of light

Only windows for ventilation/venting opens. All other windows have fixed frames to save energy.

See more examples of beautiful facades letting in lots of daylight through fixed frames at: www.unikfunkis.dk – Inspiration, Fixed Frame

A floor-to-ceiling design lets in lots of daylight

SINGLE POST SYSTEM

This elegant design eliminates frames next to frames where windows are adjacent. The modular single post system gives a clean facade. Frames are narrow, and no frame abuts another – horizontally or vertically.

FACADE DOORS

The face of your home

The sky is the limit for giving your home its very own personality. Choose a front door design that makes your home unique.

Manufacturing Quality

Production Facilities

Our windows and doors are manufactured at a state-of-the-art industrial plant in Viborg, Denmark. Our committed and skilled employees ensure compliance with our requirements for high quality.

Guaranteed Quality

UnikFunkis is a member of the Window Industry Association. Consumers are covered by the warranty provisions backed by the association. www.vinduesindustrien.dk

UnikFunkis is a member of DVV, a Danish quality assurance organization overseeing production and quality management on the part of member companies manufacturing windows. Customers are assured that our products comply with industry technical specifications.

WINDOW AND DOOR FRAMES

Energy-efficient designs meeting the latest requirements

Traditional Wood Windows or Wood/Aluminum Frames

You may prefer traditional wood windows in mahogany or pine. However, combining wood and aluminum to make window and door frames gives many advantages. Inside, the windows and doors look just like conventional wood windows. Externally, the UnikFunkis products look like the traditional wood windows and doors, but the casing and frame surfaces are made of aluminum. The wood and the aluminum are assembled using insulating material in the frame, thus providing excellent insulation. The windows come with double or triple panes.

The aluminum frame surfaces provide effective protection of the underlying wood that has been primed and surface treated in the same way as other wood elements from UnikFunkis. In addition, they offer the advantage of a minimum of maintenance. They would only require cleaning when the windows are being washed anyway. The aluminum surfaces are powder coated and are available in nine standard colors. Custom colors are available on request.

Energy Plus – a Market Leader in Energy Savings

The UnikFunkis designed Energy Plus window meets the energy requirements expected to be posed by the Danish construction industry by 2020.

Energy Plus has a traditional frame for mounting in a brick wall opening. The windows are made of wood and aluminum, with triple panes and warm edge spacers to minimize heat loss. All designs and models have a frame depth of 140 mm. Energy Plus is available with built-in blinds.

MAHOGANY

Mahogany frames with double panes. Regular treatment with oil maintains the color and appearance of the wood.

WOOD / ALUMINUM ENERGY SAVING FRAME

Fixed wood / aluminum frame. Double or triple panes.

PINE FRAME

Fixed pine frame. Double or triple panes.

WOOD / ALUMINUM ENERGY SAVING FRAME

Frame design. Double pane and sloping bottom rebate – no tracks to collect dirt.

WOOD / ALUMINUM ENERGY PLUS

Frame design. Energy Plus meets anticipated Danish 2020 industry standards. Triple panes, frame depth 140 mm. Sloping bottom rebate – no tracks to collect dirt.

WOOD / ALUMINUM ENERGY SAVING FRAME

Frame design. Triple pane and sloping bottom rebate – no tracks to collect dirt.

Uniform Facade Letting in More Light: Narrow Frames

In the past, it was hard to miss the difference between the appearance of doors and that of windows. Now, it's possible to streamline the appearance of a facade by using narrow frames for both – without giving up on functional quality and with new benefits. As an example, doors come with a brand new hinge design and a threshold that is flush with the floor. The elements are easy to install and come with 2 or 3 panes. The narrow frame and the larger glass area helps improve energy efficiency.

The narrow frame windows come in single and double door designs, and the doors are available as outwards going and folding doors. The number of folds is tailored to the building in order to achieve an architecturally perfect appearance. The folding doors let you open up the entire facade to bring the outside in.

Folding doors always fold outward.

UnikFunktis Standard Colors

RAL 9001 Creme White

RAL 9010 Pure White

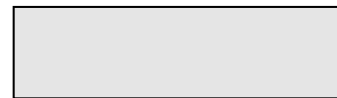

RAL 9005 Jet Black

RAL 3011 Brown Red

RAL 6007 Bottle Green

RAL 7035 Light Grey

RAL 7016 Anthracite

RAL 7042 Traffic grey

RAL 8016 Mahogany Brown

Actual colors may vary slightly from the print samples shown here.

Pine windows and doors are primed with an anti-rot/anti-mold agent and then color painted.

For custom orders, a semi-transparent finish is available.

Mahogany windows are primed with oil.

Wood and wood/aluminum elements are available in a two-tone design. In wood/aluminum windows, the exterior aluminium is powder coated, and the interior is treated wood.

Custom Colors

In addition to the standard colors shown here, custom colors are available. For details on ongoing maintenance, check the user guides at www.unikfunktis.dk

Standard low profile threshold – outswing doors

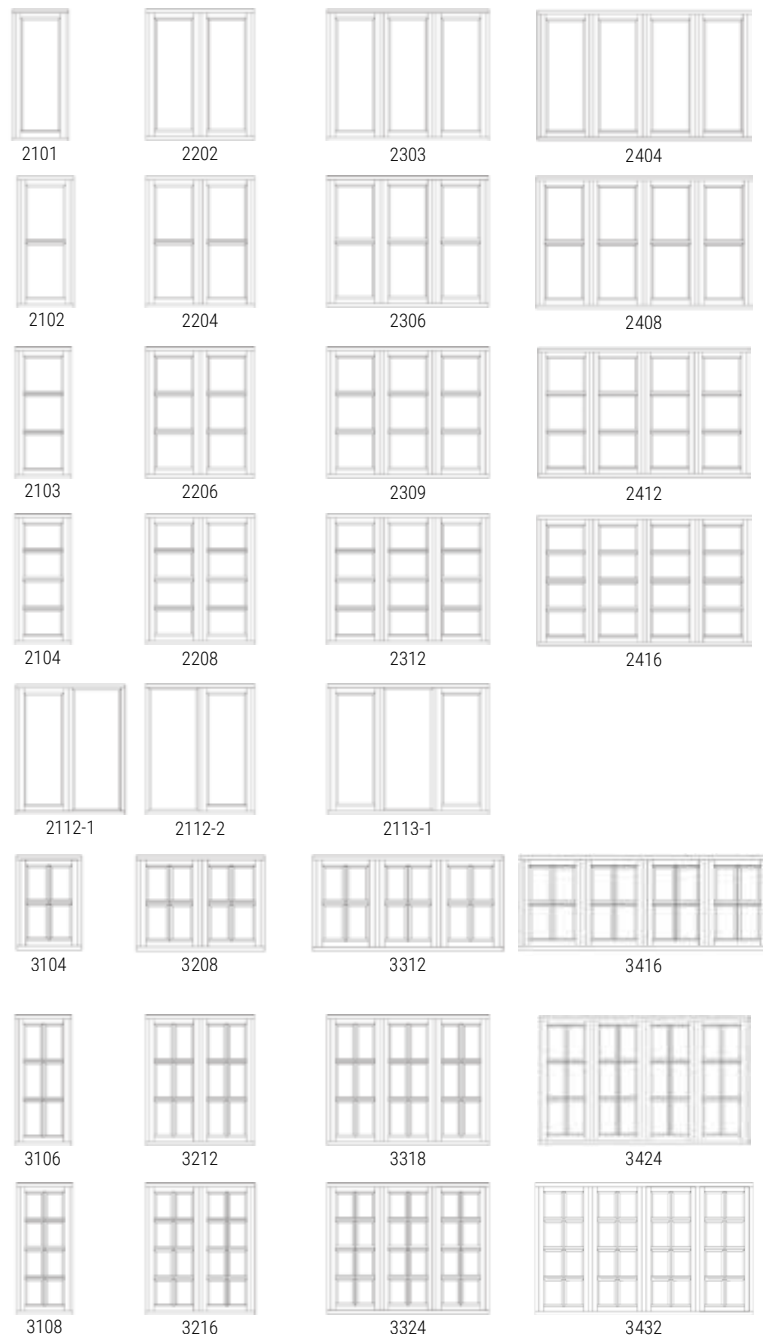

Contemporary Windows

Contemporary windows – primarily in new construction – typically reflect a sleek design and clean lines. So do UnikFunkis elements – in all types of materials. Available as side hung, top hung, or tilt & turn.

Cottage Windows

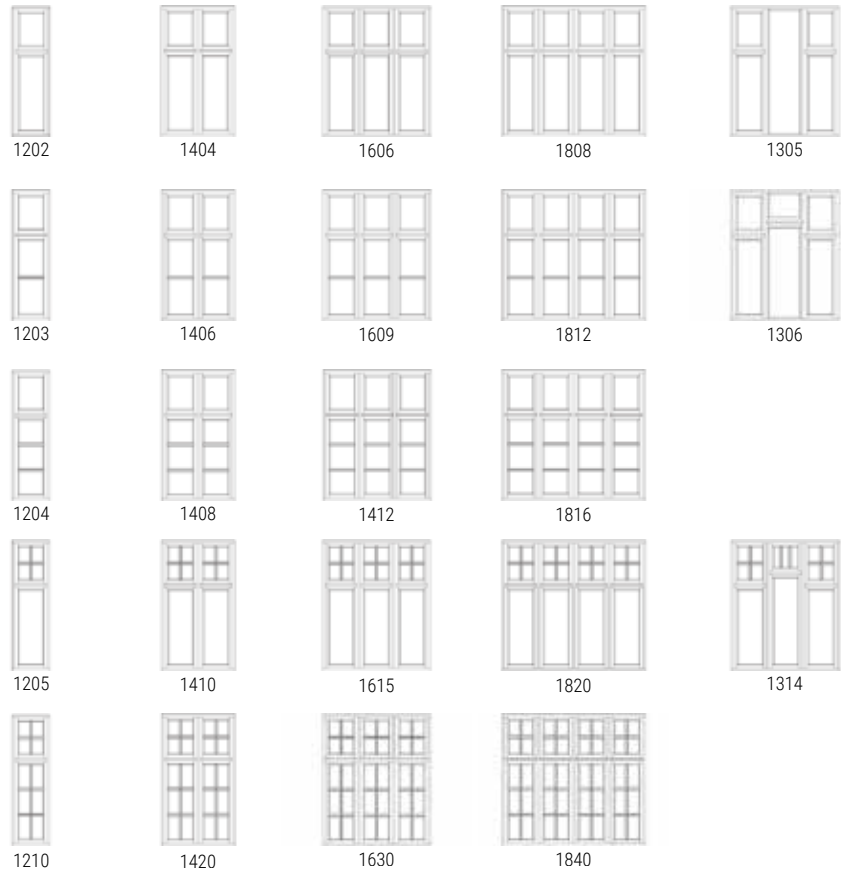

Replacement of older windows ideally preserves the original architectural look of the facade. Available as side hung or top hung with storm hook and fastener or handle and rod latch.

The illustrations shown here are standard designs. You may customize your windows to meet your precise requirements.

Casement Windows

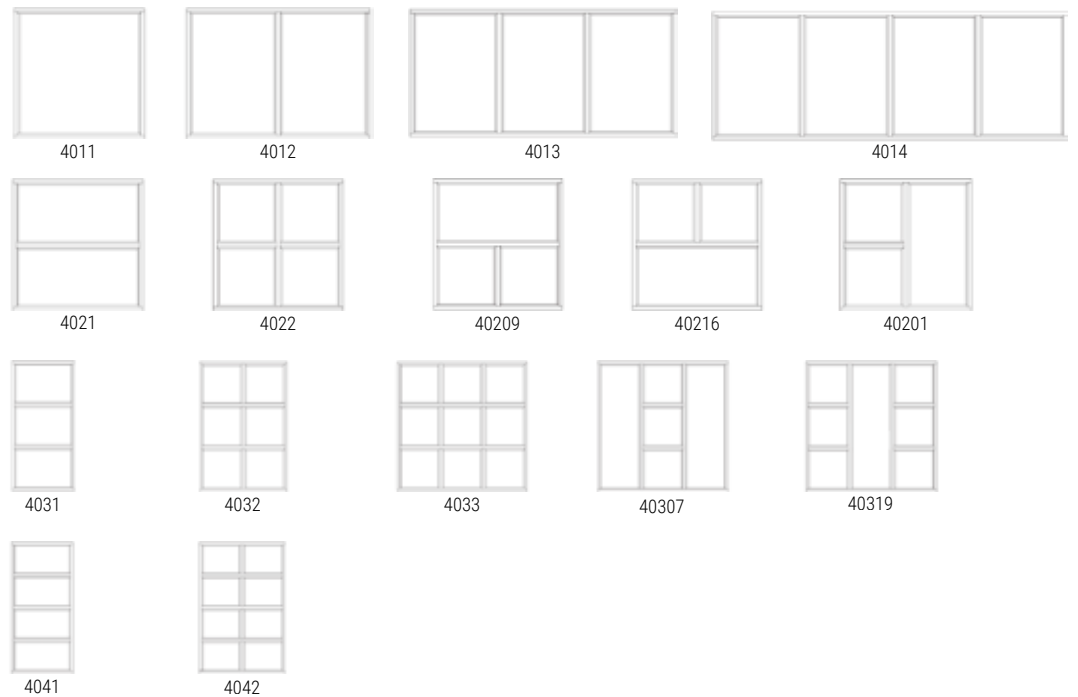

When replacing old style windows, it's important to pay attention to details. Old style windows were often designed with narrow glazing bars. We have developed a unique and functional – and energy saving – modern version.

Fixed Frames

Fixed frames may be subdivided by posts and feature glass panes or insulated panels.

The illustrations shown here are standard designs. You may customize your windows to meet your precise requirements.

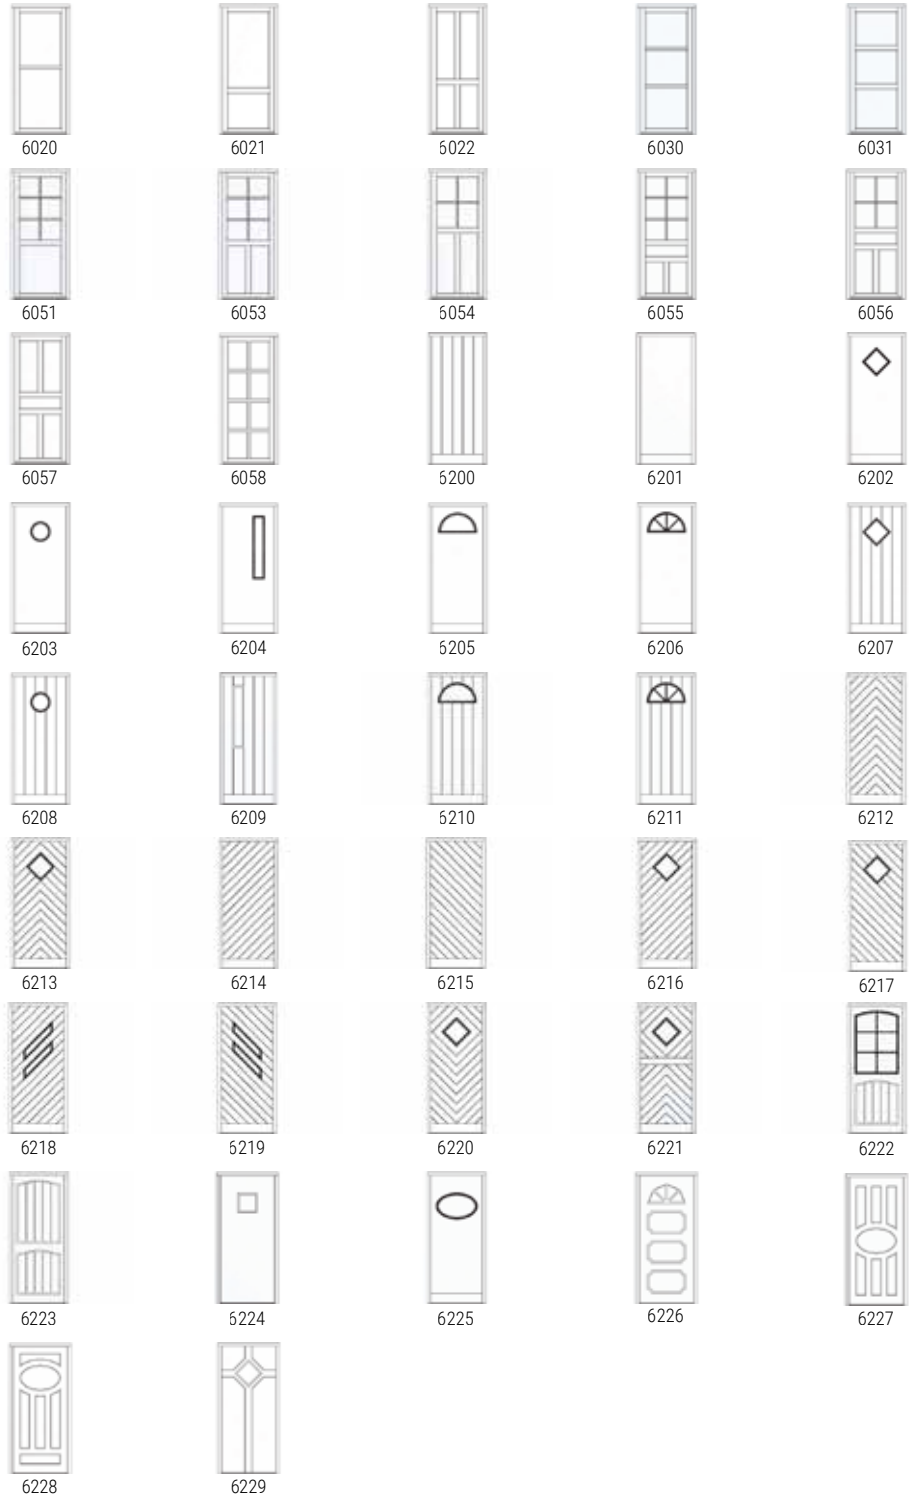

The illustrations shown here are standard designs. You may customize your windows to meet your precise requirements.

Entry Doors

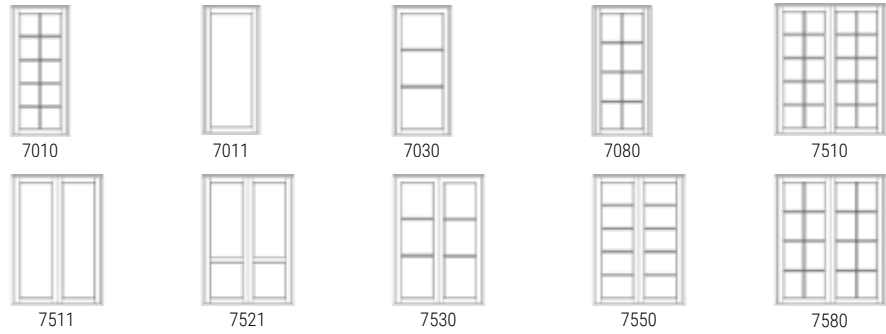

Traditionally, front doors have a more prominent appearance than other doors and windows of the building. The entry door should clearly indicate the main entry point yet at the same time harmonize with the architecture of the building.

The illustrations shown here are standard designs. You may customize your doors to meet your precise requirements.

Patio Doors

Patio doors are available in wood or wood/aluminum. UnikFunkis patio doors come in all styles to serve all purposes. Optional version with inswing tilt & turn door.

Sidelights

Sidelights match patio doors and entry doors.

Half Doors

Half doors match entry doors (outswing only).

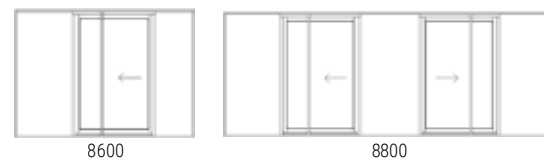

Folding Doors

Narrow-frame elements come in wood and wood/aluminum. Folding doors always fold out.

Sliding/ Tilting Doors

Sliding/tilting doors come in single door and double door designs. Double doors give you lots of light. The sliding door is on the inside.

Lifting/ Sliding Doors

Lifting/sliding doors are a very popular option. The sliding door is on the outside.

The illustrations shown here are standard designs. You may customize your doors to meet your precise requirements.
